Art Unit: 1648

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method for detecting *pol* gene mutations HIV-1 wherein the sample is a RNA isolate, classified in class 435, subclass 91.2.
- II. Claims 10 -18, drawn to a method for detecting *pol* gene mutations HIV-1 wherein the sample is a DNA isolate, classified in class 536, subclass 23.1.
- III. Claims 19 and 20, drawn to primer sequences and a kit for detecting the mutations, classified in class 435, subclass 810.

The inventions are distinct, each from the other because of the following reasons:

Group III is a compositions and is distinct from groups I and II which are drawn to methods. Group III comprises primers which are made up of nucleic acid sequences.

Groups I and II are drawn to methods and each is distinct from the other because they utilize different starting materials. Group I is drawn to a method for of detecting a mutation in the *pol* gene of HIV-1, the test sample is obtained from isolating RNA. Group II is drawn to a method for of detecting a mutation in the *pol* gene of HIV-1, the test sample is obtained from isolating DNA. Though there may be overlap in the methods of group I and II the initial isolation procedure to obtain an RNA or DNA sample require different processes using different methods and materials. Therefore, restriction between the methods is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.
